

Data Collection Solutions from *Prism Enterprises*

Scale Sentinel is designed as a companion to the GSE 60 series process controllers. This software provides the ability to maintain source databases and collect transactional data from these instruments regardless of the application or database set up on the controllers. The data is maintained in industry standard Microsoft ACCESS database tables.

Upload source data to the controller(s).

Scale Sentinel installed in the tray, ready to receive data.

The screenshot shows a Microsoft Access database with two tables. The 'Destination Table' has columns for ID, NF, and a date range from 2001 to 11/20/00. The 'Transactions Table' is a detailed data table with columns for transaction ID, truck ID, material code, destination code, hauler ID, operator ID, gross weight, tare weight, net weight, and axle weight.

ID	NF	Year
2001	GA	2001
2002	GA	2002
2003	PA	2003
2004	RC	2004
2005	SI	2005

Use ACCESS to manage your data

Features.....

- 32 bit windows application
- Uses industry standard ACCESS database tables
- Works with ANY GSE controller application program
